

Auto reversing light

Auto reversing lights are installed at the end of the auto, it is used to bright the road behind the auto and also remind people and vehicles behind the auto.

There are many kinds of reversing lights in the market:

1, clarify by material: gas reversing light and led reversing light

Halogen reversing light is one of the gas reversing lights, it is a traditional products with lower price, but there is radiation and mercury with halogen reversing light and it is not environmental friendly. It is also easy to be broken and its use life is much shorter than LED light.

LED light is environmental friendly, no radiation and much longer use life.

2, clarify by base: A,P21W; B,W21W; C,P27W; D, W16W.

Explanation of the base type of reversing light:

A,P21W: the power is 21W, the diameter of the bulb is 26.5mm, total length is 52.5mm, it is also named BA15S or 1156.

B,W21W: the power is also 21W, and another name is 7440.

C,P27W: the power is 27W and it is also called 3156.

D, W16W: the power is 16W, the diameter of the bulb is 15.2mm, total length is 35.6mm, it is also known as W2.1×9.5d.

Cyue offer P21W only at present.
