

Car led fog lamp

[Auto fog light](#) is installed on the front of or end of the vehicle, on the position which is a little lower than the headlight. They are used to bright the road during rainy or foggy weather.

Due to poor visibility in rainy or foggy weather, sight of drivers is limited and they need a light to extend the sight, so that they can drive safely and avoid accident.

Fog lights always adopt yellow color, yellow light is pure and with strong penetration and it is able to exposure to a far place. Some areas also allow fog light with white and red light.

What's the difference between fog light in the front of the vehicle and fog light at end of the vehicle? The front is with downward light and the end is with parallel light, some times they work at the same time.

Here are some tips for using fog lights:

- 1, It is not good to install the fog light in a high position, it is better install it below the bumper, the part which is nearest to the earth.
- 2, Do not use fog light if it is not rainy or foggy weather, fog light is dazzling and harm to eyes, and it may cause dangerous to the following driver. It is illegal to use fog light at inappropriate occasion in some areas.
- 3, Please replace a non-work fog light as soon as possible, and please also care about other factors like weak light, dusty, battery, old wires periodically.
